AHMED BASSIOUNY

Mobile Developer

About me

———

Hello, I'm a Mobile Software Developer (Android, iOS and Flutter too). I will always do my absolute best to meet your needs and deadlines. I am able to take a project from inception to production (You think of it and I'll do it). I also love the challenge of debugging and resolving errors/issues and adding new features in already existing Apps (You can learn so much from working with someone else's code). I'm a team player, But I can also handle working on my own too.
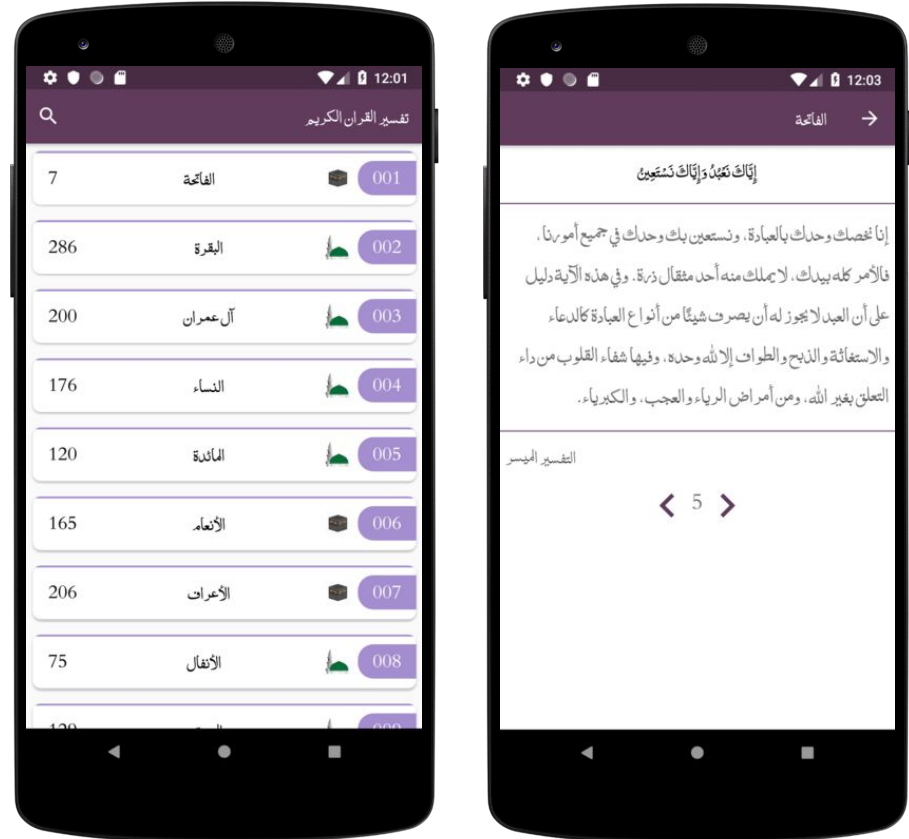

Skills & expertise

Portfolio samples

Tafseer Quran

— — —

- [Kotlin] programming language
- [MVVM] code architecture
- [Retrofit_Gson] for request api
- AndroidX
